

When you begin, you're little.
Not compared to ants.
Compared to ants you're a giant.
If a thousand ants stood on each other's shoulders, you'd still be taller.
Probably.

Compared to ants, you are loud.
Compared to the ocean, you are quiet.
Compared to the speed of light, you're slow
Compared to gravity, you are unpredictable.
Compared to the stars, you are dark.
But when matter is energised, it gets excited and releases that energy as light
And then we glow.
We glow.
